- Python
- Typescript
- Javascript
- HTML
- CSS
- Django
- ReactJS
- NestJS
- Gnu/Linux
- Git

PROJECTS

Shopping site

PRESENT

I am currently creating a shopping site, mainly to learn how to use NestJS with ReactJS in a practical case. I'm using NestJS for its backend, ReactJS for its frontend and MongoDB for its database.

Physics Question Solver

2022

I created [this](#) website as my first ReactJS project in order to learn it. I decided to remake a small part of [hyperPhysics](#)(a website which I used for my school physics course) using React, so it enabled me to learn React while getting more skilled in my physics course.

Railnet.ir

2021

I made this web-based program for Meyar Keyfiat Co. named [Railnet](#), using Django and Python. My focus in this project was mostly on the backend rather than the frontend. The goal of this project was to enable staff from different locations to be able to enter the data they gain by inspecting wagons for the company in a single database. The achievements of this project were that the company didn't need to enter the data manually from papers into a database, instead, the staff did this themselves.

EDUCATION

Bowness High school, Calgary

2022 - Present

I currently have finished grade 11 and I'll be in grade 12 next year. I'll graduate next year from high school.

HOBBIES

Soccer

Playing Piano
